

MV POWER is an Engineering Services Company designed to be your Engineering “on demand” department. Over the years we became “One stop shop” for many Customers that use our “know-how” and manpower to maintain their switchgear.

MV POWER Services include:

- Switchgear Services (Design, Engineering and Inspection of the Switchgear);
- Electrical Engineering Services (Power Distribution, Controls and Relay Protection);
- Mechanical Engineering Services (Mechanical Design of metal structures and parts);
- Project Management Services (Projects for Utilities and Manufacturing Plants);
- Educational Services (Switchgear Design with engineering calculations);
- Drafting Services (Blue print 2D packages in AutoCAD).

The MV POWER offers switchgear inspection, evaluation and refurbishment. Unmaintained switchgear is a time bomb. Heat and water, dust and dirt, aging insulation, loose hardware on the bus joints – all are working against your Power Distribution asset. It takes one day to remove covers, make detailed inspection and do clean up. Repairs and re-insulation can be done on the next outage. Above photos are story for itself.

Please contact us for your switchgear inspection, evaluation and refurbishment needs.

Committed to servicing you,

Aleksandar Buntic, BSEE
Project Manager
